

How Hackers Really Infiltrate Organizations

Most breaches don't start with sophisticated tools. They start with a simple mistake a single click.

Swipe to see

A Deceptive Email Lands

Hackers send realistic, well written emails that look completely genuine. One careless click gives them a way in.

90% of cyberattacks begin with phishing.

Access Gained, Quietly Maintained

After the first click, attackers install hidden access tools. They use normal admin utilities so their actions look routine.

On average, attackers remain undetected for 22 days.

Moving Up the **Chain**

Now they steal credentials and access more systems. Each new login brings them closer to confidential data.

Most attackers reach 11 systems before being noticed.

Data Stolen in **Plain Sight**

Finally, they locate valuable files, compress them, and quietly transfer everything out of your network.

71% of breaches include data theft within 24 hours.

Would Your Team Detect This in **Time?**

Briskinfosec's Red Team Assessment simulates real attack chains to reveal blind spots before real hackers find them.
